A POSSIBLE NEW SYNTHESIS OF (+)-OBAFLUORIN
A β -LACTONE ANTIBIOTIC
Niki Handlin and Jeffrey Frick*
Department of Chemistry
Illinois Wesleyan University, Bloomington, Illinois

Obafluorin (**1**), an antibiotic with a β -lactone ring is proposed to have the same stereochemistry as other β -lactam antibiotics such as the penicillin and cephalosporin families. The biological importance and synthetic challenge of such an antibiotic as obafluorin has increased the interest in synthesis of β -lactone antibiotics. Our research focuses on the synthesis of the title compound, (+)-obafluorin from (*L*)-serine, in an attempt to find an improved method of obtaining optically pure product.
