This Event is brought to you for free and open access by The Ames Library, the Andrew W. Mellon Center for Curricular and Faculty Development, the Office of the Provost and the Office of the President. It has been accepted for inclusion in Digital Commons @ IWU by the faculty at Illinois Wesleyan University. For more information, please contact digitalcommons@iwu.edu.

Poster Presentation P45

A MULTI-CHANNEL, MULTI-MODE BIOPOTENTIAL MEASUREMENT DEVICE

Boxiang Liu and Thushara Perera*
Physics Department, Illinois Wesleyan University

We present research related to the design and construction of a biopotential measurement device that can be utilized for Electroencephalograph (EEG), electrocardiograph (ECG), electromyograph (EMG), and electrooculograph (EOG) measurements. Novel aspects of this device include JFET-based active electrodes, the stringent use of shielding and balancing methods, as well as other low-noise techniques and components. The circuit includes a pre-amplifying stage, an active low pass filter, an active high pass filter, and a final amplifying stage. An integrator is included for the EMG measurement. A switch enables the user to pick between modes of measurement. Our goal for the immediate future is to combine multi-channel signals to control a game named Osmos, which requires directional signal and speed signal inputs.
