SHARE + DC

Challenges Identified

- Journal or PI deposit workflow could be sticky; DC needs to accept XML as a primary document format, and transform that for display somehow, or accept a broader range of document formats for primary materials generally

 - Challenges identifying an appropriate repository, especially for smaller schools without IRs. May be storage limits. There's a business dis-incentive for DC schools to allow non-IR schools to piggyback on existing DC implementations.
 - Kim Myers suggests maybe a "SHARE-compliance only" pricing for small schools: a stripped down DC implementation that allows for SHARE-related metadata and deposit only.

 - SWORD compliance

 - Repository/Research Office collaboration

 - Searchable metadata fields, like Author ID, Repository ID, Citation fields, etc.
 - An implementation of an author ID, like ORCID, might solve the author identity issue.
 - How do you back-identify author IDs to existing deposits?

 - Will researchers just automatically prefer discipline repositories? Will smaller schools w/ finite budget and no IR be discouraged from applying for research grants? Would a Selected Works profile be appropriate as an identified IR?
 - Group agrees a SHARE implementation team w/ reps from across the user group and from bepress.
