## ANALYSIS OF THE HYOID MUSCULATURE OF MEGADERMATID BATS

Allison Truckenbrod, Dept. of Biology, IWU, Tom Griffiths\*

The hyoid musculature of one species of the family of Megadermatid bats, Megaderma spasma, was dissected and described. An analysis was performed of the "free-floating" basihyal condition of this species. Interestingly, this condition parallels the free-floating condition found in the New World family Phyllostomidae.
