How old are you? As old as you look? As old as you act? When asked that question most people would answer by giving a number, their age in years. Growing old is a subject we all become more familiar with each day. Growing old in American society, as in any human society, is also a variable in a person's ability to sustain their self through his or her own form of work. Working through old age is significant to our society for which it is predicted that between 1996 and 2006, the percentage of 55-64 year olds will grow by 54%. With increased life expectancies of 73 years old for men and 80 years old for women, dynamic changes are occurring in the age structure of the working population. Older Americans are becoming a more prevalent portion of the workforce with increasingly later retirement ages resulting in secure, longer lasting and more rewarding careers. Remaining employed later in life is a meaningful and healthy alternative to early retirement for citizens like Elmo Quinn and Jackie Ahlers who have the ability to adapt their work capacity to fit their work environment based upon their individual needs. As a result, these older figures in the workforce provide a source of inspiration to all Americans and serve as role models to the workforce of tomorrow.
