CONSUMER PERCEPTIONS & VIDEO GAME SALES: A MEETING OF THE MINDS

John Sacranie and Robert Leekley*
Economics Department, Illinois Wesleyan University

This paper examines the determinants of video game software sales. What little literature currently exists points to an array of factors, ranging from which hardware a title is released on to the game’s genre. This paper incorporates several of these variables, but adds in a new one: quality. Literature up to this point has not addressed the effect that a game’s quality has on its eventual sales, yet one would logically expect this to have a strong positive impact. To account for quality, the model incorporates the average review score a game receives from professional critics. The results indicate that indeed, quality does play a role in consumers’ purchase decisions.
