Research Question
What physical and social approaches can be used to support students in becoming motivated readers?

Literature Review
- “If intrinsically motivated, reading will be viewed as a meaningful challenge” (Marinak, Malloy & Gambrell, 2010).
- Having a positive, social environment for students supports more exploration in various reading categories.
- Student autonomy generates more academic achievement while promoting intrinsically motivated reading.
- By creating a comfortable environment, students are able to demonstrate more focus and productivity.
- “…When teachers provide a sense of control and autonomy over their learning, there are positive results for student motivation.” (Barber & Buehl, 2013)

Methodology
- **Participants:** 21 first grade students and 27 fourth grade students both in central Illinois.
- We analyzed journal entries, field notes, photographs, guest speaker notes, interviews, and questionnaires to show how change in the environment motivated students to read.
- Beanbags, pillows, and blankets were used to encourage independent reading.

Results and Data Analysis
- Some students were more focused than others depending on the environment that they were placed in.
- Sixty-three percent of students were highly responsive to reading outside the classroom.
- When the guest reader was unknown, students showed more enthusiasm.
- Sixty-two percent of students viewed reading as an inherently social activity.

Conclusion
- Educators should provide various environments for students to read. Desirable environments leads to more concentration while reading.
- Inviting guests into the classroom is conducive to promoting social interactions between readers.
