## Research Question
- How does individualized behavior management approaches affect student achievement?
- Student achievement refers to the academic success involving positive engagement and response to learning.

## Literature Review
- Implementing proactive strategies into the classroom results in a more positive learning environment for students, which improves student achievement (Shook, 2012).
- Praise is more likely to increase motivation and achievement if teachers praise students for things they cannot control like ability and intelligence (Shook, 2012).
- Building a trusting relationship, maintaining interest, and keeping students with EBD engaged are key components to their learning (Coleman and Vaughn, 2000).
- Positive reinforcement increased engagement and decreased destructive behavior (Bernier, Simpson, & Rose, 2012).

## Methodology
- Participants: 26 third grade students from a suburban, inclusive elementary school (13 girls, 13 boys).
- Data Sources: anecdotal and field notes
- I examined which approaches were most effective and helped to improve student achievement.

## Results and Data Analysis
- Proactive strategies create a positive learning environment, which improves academic achievement.
- Forming relationships with students allows teachers to grasp an understanding of their students' academic needs, which improves academic achievement.
- Addressing students with EBD before disruptions occur and building a positive, trusting student-teacher relationship helps increase student achievement.
- Praise and positive/negative reinforcement can be effective, but can become ineffective if overused.

## Conclusion
- Findings indicate that individualizing behavior management approaches gives students the ability to attain student achievement.
- Since classrooms are becoming more inclusive, teachers need to know how to manage a variety of different needs.
