ECONOMIC INFLUENCES ON THE STOCK MARKET

Nathan Taulbee and Carolyn Stumph*
Department of Economics, Illinois Wesleyan University

This paper examines the relationship between a number of economic factors and the stock market. Using financial and economic theory, this paper assesses how some economic factors impact the S&P 500 as well as the stock prices of various industries. Specifically, how do unemployment rates, real GDP, and the Fisher effect (the one-for-one relation between nominal interest rates and expected inflation) impact the overall market as well as cyclical, defensive, interest-sensitive, and growth stocks? Generalized difference regressions will serve as the methodology to assess these relationships. Conclusions from this study will assist investors in their portfolio decision-making.
